

PC WORKSTATION

ReflectionPOS®

REAL-TIME REPORTS

PC Workstation has more than 150 real-time reports available for current day, current week and current period, as well as archived reports are available for up to 3 years.

POS PROGRAMMING

Program the Reflection POS system through a familiar, intuitive interface. Program changes are instantly downloaded to the POS terminals.

LABOR EDITING

Gives the ability to add and maintain employees, as well as edit timecard punches in a familiar Windows environment. PC Workstation puts all labor utilities at your finger tips.

CHECK VIEWER

View and print orders from current or previous business days directly from the back office computer.

PC Workstation is a software application designed for Microsoft Windows® that moves the manager functions from the point of sale system to the familiar environment of a back office computer. The software integrates seamlessly into the point of sale network and communicates directly and continuously with the POS terminals to provide real-time reports. PC Workstation has been designed to operate in a similar manner to Reflection POS to minimize setup and training time.

BACK OFFICE SOFTWARE

What is PC Workstation

PC Workstation is a back office software solution that enhances reporting capability for Reflection POS through the archiving of historical data. PC Workstation gives the luxury of automatic system resets through a system scheduler for consistency and reliability. Using check viewer, managers gain the means to research anomalies by using a grid view with the ability to sort by any of the check criteria.

PC Workstation provides the ability to add and maintain employees in a familiar Windows environment with easy access to timecard editing. Managers are able to obtain detailed Payroll reports including timecard, tip, and pay information. PC Workstation also offers Labor variance reports that can be used to compare actual payroll to scheduled payroll.

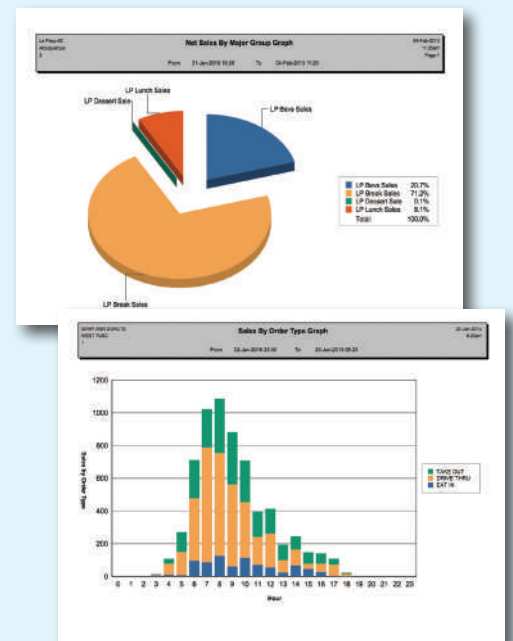

Enhanced Reporting

PC Workstation can regenerate reports by unique date ranges for up to 3 years. It provides the ability to print reports, or export them into industry useful formats, such as Excel or PDF. PC Workstation can also export sales data directly into a QuickBooks format for integration. PC Workstation provides graphic reporting which is convenient for conveying trends in sales, as well as labor.

Features

- Reports can be regenerated for specific date ranges
- Enhanced reporting for In-House Charge Accounts with mailing statements
- Allows manager to make POS Programming changes with the ease of a mouse and keyboard
- Real-time reporting from a back office computer that can be printed onto 8 1/2 x 11 paper.
